SUBUNIT: THERE ARE SIX TYPE IV COLLAGEN ISOPOMS, ALPHA I(IV) ALPHA 6(IV), EACH OF WHICH CAN FORM A TRIPLE HELIX STRUCTURE WITH 2 OTHER CHANS TO GENERATE TYPE IV COLLAGEN NETWORK. DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A MONOCLAGENUS SOMAIN (NCI) AT THEIR C-TERMINIS, FREDUER'I INTERUPTIONS OF THE G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL TO DOMAIN.

FUNCTION: INVOLVED IN TRANSPORT OF PHOSPHOLIPIDS (POTENTIAL)

CATALYTIC ACTIVITY: AFP + H(2)F0 - ADP + PHOSPHATE.

SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN

SINILARITY: BELONGS TO THE CATION TRANSPORT AFPASES FAMILY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BORDERS PREDICTED FROM THE GENOMIC SEQUENCE.

The sequence contained an oligo-dr track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonalide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to identify It as a clone from the normalized AV canal at 13 opt library cONA Library Preparation:

M. B. Soares Lab Clone distribution: Clones will be available through Research Genetics (www.respen.com) The following repetitive clements were found in this cDNA sequence: 1-41.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      University of Iowa

Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-41,
                                                                                                                                                                                                                                                  Buall: mscares@bluc.weg.ulowa.edu
The sequence contained an oligo-off track that was present in the
Oligonucleotide that was used to prime the syntaxic first
strand cDNA and therefore this may represent a bonaide poly A
and the oligo-off track served to identify it as clone from the
normalized wentricle at, 16.5. dpc library cDNA Library Preparation:

The sequence contained an oligo-off track that was prosent in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
toll. The sequence tag present in the cDNA between the Not! site
and the oligo-off track served to verify it as a clone from the
normalized Eye library cDNA Library Preparation: M.B. Soarcs lab
clone distribution: clones will be available through Research

The subtracted library (UT-REI) was constructed as follows: PCR amplified CDNA inserts from a pool of UT-REO clones from which 3 ESTS had been decrived was used as a driver in a hypridization with the UT-REO library in the form of single-stranded circles. The remaining single-tranded circles substracted library was purified by stranded circles (subtracted library) was purified by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               llbrary. The UI-R-E0 llbrary consisted of a mixture of individually the constructed from a library constituence from the constructed from 8, 12 and 18 day embryo. The tag is a string of 3.5 muclocities present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bacteria (Life Technologies) to generate the UI-R-El
